✓ How much does it cost?

Kodular is **FREE!**

Kodular Creator is **completely free of charge**. You can use it for whatever you want, and *we will never ask you to pay us for its usage*.

We wanted it like that so **anyone could convert their desired ideas into apps** in a simple way. We think that *everybody should have the right to create apps even without knowing how to code*. That is why our platform is free and **it will remain like that forever**.

This also extends to **Kodular Store** and **Kodular Extensions IDE**.

” Why this business model?

Kodular was created to provide an accessible suite for everyone to learn and, later, professionally create apps. Due to this, we strongly believe learning to code has to be a right and nobody should have to pay in order to learn the basics of programming.

Kodular Creator provides one of the most complete tools in Internet to create apps without coding, and moreover it is being used by tons of students all over the world. Everybody has to be able to make their idea reality independently of their income. Someone can have the next big revolutionary idea, but sometimes without money it cannot be done.

We don't want this to happen.

What is fairer? Getting a fixed quota from everyone, without taking into account if they earn something, or taking the proportional earnings people make with our platform? We think the answer is very obvious.

We do not earn nothing from people which doesn't earn anything with our platform. And we only earn from people who monetize their apps, earning money with Kodular Creator.

Commissions

Updated: 19 January 2019 - 02 May 2019

Due to some technical issues with Google, apps generated with Kodular Creator Versions from Draco 1.3.1 to 1.3B.4, both included, will be free of comission. We will update this page as soon as it gets fixed.

However, to keep our services for free, *we take a small comission from your earnings in ads*. We do not force nobody to place ads in apps, but if you want to earn money, we take a percentage of your earnings.

The components we take commissions from are **only** Interstitial ones. The other ones are free of commissions. Interstitial ads are the top performing ad types.

The percentage of your earnings we take **starts from a basic 5%**, and increases depending on the *number of components and features* you use in your app. For example, if an app is very simple, *we will only take the 5% of those earnings*. But if the app uses all our components and features, *the commission will be increased*. You can calculate the final commission using [this app](#).

You do not have to worry about paying us the correct percentage. **We take it automatically** using something called "fallback ads". Find more information about this [here](#).

Premium Plan

Since *time ago*, we have said that **Kodular Creator will not have a Premium Plan**. This also extends to **Kodular Store**.

But the **Extensions IDE will have a Premium Plan**. Currently available features *will not disappear or will not reduce its features*. We will only **develop new features** for the Premium Plan, for example *removing the waiting queue or uploading custom libraries*.
